EDUCATION

2023-2027

RAMAIAH INSTITUTE OF
TECHNOLOGY

- Bachelor of Engineering
- Information Science and Engineering
- CGPA : **9.66/10** (Till 5th Semester)

G D GOENKA PUBLIC SCHOOL

- Grade 12 (2022)
- Percentage : **92.8**
- Grade 10 (2020)
- Percentage : **94**

SKILLS

- **Languages:** C, C++, JavaScript, Java, TypeScript, Python
- **Utilities :** Git, GitHub, Postman, JWT Authentication, RESTful APIs
- **Framework:** React.js, Next.js, Node.js, Express.js, Tailwind CSS
- **Database:** MongoDB ,MySQL

RELEVANT COURSES

- Data Structures
- Algorithms
- Computer Networks
- Computer Organisation
- Operating Systems
- Object - Oriented Programming
- Database Management Systems(MySql)
- Theory of Computation

PROFILE SUMMARY

I'm an Information Science student who's genuinely curious about how things work behind the scenes. I enjoy breaking down problems and figuring out efficient solutions using data structures and algorithms. I've also started exploring web development and love building small projects that help me understand concepts better. I'm always eager to learn and improve, and I like working on things that challenge me to think deeper.

PROJECTS

DIGITAL WAR MEMORIAL - BHARAT KE VEER

Github Link: <https://github.com/VedantSaraf1301/Digital-War-Memorial>

Visit Website : <https://bharatkeveer-delta.vercel.app/>

- Developed a Digital War Memorial web application using **React.js** to honor and showcase information about soldiers.
- Built a **search and filter feature** (currently under development) to enable users to quickly locate records based on criteria such as name, operation, or year.
- Focused on **responsive design** and **user-friendly** navigation to ensure accessibility across devices.

CODE SAATHI – DSA PRACTICE PLATFORM

Github Link: <https://github.com/VedantSaraf1301/CodeSaathi>

- Developing a **LeetCode-style coding platform** enabling users to practice **Data Structures and Algorithms** problems with **structured problem sets**.
- Implemented **problem management and dynamic problem rendering**, allowing users to view coding challenges and associated details.
- Integrated **database operations using Prisma ORM with PostgreSQL** for efficient storage and retrieval of problem data.
- Designed a **modular full-stack architecture using Next.js**, improving **maintainability** through **reusable** components, hooks, and service modules.

VO ENGINE – AI-POWERED FULL-STACK PROJECT BUILDER

Github Link: <https://github.com/VedantSaraf1301/v0-Vercel>

- Developed an **AI-driven** project generation engine that allows users to create full-stack applications by directly interacting with large language models through structured prompts.
- Implemented **rate limiting** and **usage tracking** using Prisma ORM and database-backed schemas to manage user credits and API consumption efficiently.
- Integrated authentication and user management using Clerk, enabling **secure** and **scalable** access control.
- Designed a **modular architecture** with **reusable hooks, API layers**, and state management for handling **real-time message generation** and **project workflows**.

HACKATHONS & TECHNICAL EVENTS

- **2nd Place** out of **140** teams, Intra College **DSA & Logical Reasoning** Contest – solved **algorithmic and logic-based** challenges under **time constraints**
